AuraGuide

A Lifeline for Family Caregivers.

Voice-first AI assistant that reduces caregiver burden, prevents medical errors, and protects caregiver wellbeing.

"63 Million Invisible Workers. \$1 Trillion in Unpaid Labor. Zero Purpose-Built Tools."

CONFIDENTIAL | APRIL 2026 | VIKTRON HEALTH

The Invisible Backbone of American Healthcare

Family caregivers are the backbone of American healthcare — yet they remain completely invisible to the technology industry.

63M

Unpaid Family Caregivers

In the US today — a 19% increase since 2020.

\$1T

Annual Economic Value

Unpaid caregiving in 2024 exceeds total US Medicaid spending of \$932B.

27 hrs

Per Week Average

40%+ provide high-intensity care. Only 22% receive any formal training.

\$10,200

Out-of-Pocket Per Year

1 in 4 take on debt. 1 in 5 cannot afford food.

 The US caregiver population is projected to grow as 10,000 baby boomers turn 65 every single day. By 2030, all 73 million boomers will be 65+. No dominant platform has emerged to serve this demand surge.

THE PROBLEM

The Caregiver Collapse Cycle

Caregiving is a 24/7 medical, logistical, and emotional operation — performed by untrained individuals under extreme and sustained stress.

- 1

Physical Blockade

The hands-full reality. Caregivers cannot type during active care. Critical data goes unlogged. **90%** of medication errors reported to Poison Control Centers occur at home. Error rates hit 14–23%.
- 2

The Knowledge Gap

Information overload. Managing 5+ medications, contraindications, and shifting baselines from memory. **78%** manage complex medical tasks with zero clinical background. Only 22% receive training.
- 3

Critical Errors

Cascade failure. Medication errors cost the US healthcare system **\$300 billion annually**. 1 in 131 non-hospital deaths are tied to these errors.
- 4

Caregiver Burnout

87% report significant stress. **78%** experience burnout. **36%** experience clinical depression. ER utilization rises **73%** when caregivers burn out.
- ☐

"Mobile screens are fundamentally incompatible with active caregiving. The solution must be voice-first — and medically intelligent."

AuraGuide: The Zero-Friction Medical Intelligence Partner

An AI assistant that does not just log data — it understands clinical context, fills the medical knowledge gap, and becomes the intelligence layer caregivers were never given. Speak naturally while hands are on the patient. AuraGuide listens, interprets clinical context, and responds with the right information at exactly the right moment.

Voice-First Medical Intelligence

Tracks schedules, checks real-time drug interactions, confirms dosages, proactively flags dangerous combinations. Holds full clinical context so caregivers stop memorizing.

Real-Time Crisis Intelligence

Recognizes symptom patterns against clinical protocols. Locates nearest urgent care with wait times. Auto-generates medication and vitals summary for ER visits. All by voice.

Passive Wellbeing Monitoring

Voice-tone analysis detects early burnout. Triggers guided breathing and respite care resources. Protecting the caregiver IS protecting the patient.

40+ Language Support

Operates fully in the caregiver's native language including clinical vocabulary. Eliminates dangerous translation friction in multilingual households.

i AuraGuide is not a scheduling app with voice features added on. It is a medical intelligence layer — built on clinical protocols, drug interaction databases, and caregiver-specific workflow patterns.

The Operating System for Home Care

Conversations That Save Time and Lives

Medication Management

Caregiver: "AuraGuide, what medication is next?"

AuraGuide: "Robert's Metformin 500mg is due at 2:00 PM. He took his morning Lisinopril at 8:15 AM. Metformin should be taken with food. Flagging: his Lisinopril dose is due for review at Thursday's appointment."

Urgent Care

Caregiver: "He has a fever of 101 and seems confused."

AuraGuide: "Sudden confusion with fever can indicate a UTI or early sepsis. I've located 3 urgent care clinics nearby; the closest has a 12-minute wait. Shall I prepare his complete medication list and symptom timeline?"

Vitals Tracking

Caregiver: "Log blood pressure 140 over 90 for Robert."

"AuraGuide: "Logged. That reading is elevated Robert's 30-day baseline is 122/80. I've flagged this for Thursday's 3 PM appointment. If it reaches 160/100, I'll alert you immediately."

Caregiver Wellbeing

Caregiver: "I haven't slept properly in days and I feel like I'm losing it."

"AuraGuide: "Sleep deprivation significantly increases caregiver error risk. You matter too. Would you like a 5-minute guided breathing session right now? I can also search for nearby respite care."

A \$72B Market at a Structural Inflection Point. No Dominant Player. Perfect Timing.

5 Converging Forces — Why Now:

- 1** **Demographic Avalanche**
10,000 boomers turn 65 daily. By 2030, all 73M will be 65+. Projected shortfall of 1.5M professional caregivers by 2030.
- 2** **\$1 Trillion Policy Priority**
Unpaid caregiving exceeded Medicaid in 2024. Corporate caregiver benefits are a top Fortune 500 HR priority for 2025–2026.
- 3** **Voice AI Mainstream**
On-device LLMs and 98%+ accuracy in noisy homes make clinical-grade voice AI viable now. Healthcare voice AI CAGR: 37.87%.
- 4** **Post-COVID Acuity Shift**
35%+ increase in home-based care since 2020. Medically complex patients now under untrained family supervision.
- 5** **Complete White Space**
Existing apps are passive. Clinical platforms ignore families. No app combines voice + clinical AI + wellbeing.

Built for Caregivers, Not Just Patients.

AuraGuide is the only platform purpose-built for the caregiver's workflow — combining clinical AI, voice-first design, wellbeing monitoring, and a hardware integration path no competitor can replicate.

📄 "AuraGuide is the only platform that combines voice-first design, clinical AI intelligence, and caregiver wellbeing monitoring at a consumer price point."

Software-First, Recurring Revenue Engine

AuraGuide runs on a freemium SaaS model with three tiers and a clear enterprise path.

Free — Freemium Onramp

Basic care logging, medication reminders, emergency contacts. No credit card required. Designed as onboarding funnel for premium conversion.

Premium — \$29.99/month

Full voice AI with clinical intelligence, smart care plans, medication interaction checking, wellbeing monitoring, multi-language support, family sharing.

Benchmarked: Calm (\$14.99), Noom (\$17), Papa (\$20–35). AuraGuide delivers direct clinical safety value at the same consumer price.

Enterprise — Per-Seat Licensing

Home health agencies and hospital discharge programs. Admin dashboard, HIPAA-ready, bulk licensing, clinical outcome analytics.

Target: 50 accounts × 20 seats × \$25/seat/month = **\$25,000 MRR by Year 3.**

15%

Freemium Conversion

vs. industry benchmark of 8–12%; caregiver urgency drives higher conversion

Scalable software infrastructure

Traction & Team

Building toward Series A with proven technical execution and a clear 18-month roadmap.

Current Traction

-  ✓ Working voice AI app with end-to-end clinical pipeline
-  ✓ App Store submission preparation in progress
-  ✓ Viktron Health Delaware C-Corp incorporated
-  ✓ 15–20 structured beta recruits identified through care centers
-  ✓ Patent pending: cognitive augmentation system for memory-impaired patient care (USPTO)
-  ✓ AuraPath smart glasses hardware prototype complete (MLX face recognition functional)

The Team — Vikash V I Founder & CEO

-  10+ years as AI Architect: LLM orchestration, RAG pipelines, multi-agent systems at enterprise scale
-  Patent inventor: cognitive augmentation system for memory-impaired patients (USPTO pending)
-  Built AuraPath prototype and AuraGuide app entirely solo — technical execution already proven
-  Enterprise AI delivery across GCP, Azure, and AWS for Fortune 500 clients

18-Month Roadmap

Planned Hires With This Round:

- Clinical Care Advisor (RN/MD) — Validates clinical protocols
- UX / Voice Design Lead — Healthcare voice interfaces
- Community Manager — Primary GTM engine
- Regulatory Counsel — HIPAA compliance & FDA pathway

THE ASK

\$500,000 Pre-Seed

Post-Money SAFE | \$3M–\$5M Valuation Cap | 20% Discount | Minimum viable raise: \$400K

40% — Product & Engineering (\$200K)

Voice AI clinical accuracy refinement, premium feature development, multi-language medical vocabulary, App Store infrastructure.

30% — Go-to-Market & Beta (\$150K)

Caregiver community outreach, hospital discharge desk partnerships, care center pilots, beta program operations.

30% — Team & Operations (\$150K)

Key hires (UX lead, clinical advisor, community manager), legal, infrastructure, compliance groundwork.

✅ \$500K = 12–15 month runway | \$400K minimum: App Store launch + structured beta + initial premium revenue | \$500K full raise: PMF + 100+ active users + first enterprise conversations + Series A readiness

"AuraGuide exists for one reason: no family caregiver should navigate this alone."

— Vikash Vardhanapu | Founder & CEO | Patent Pending
